COVER: The Sweetwater Wash pluton in southeast California, USA, is part of a 2500-km-long belt of peraluminous plutons in the North American Cordillera. Mineral-scale age, isotope, and elemental investigation of a two-mica granite sample from the pluton illustrates a high degree of complexity during crustal petrogenesis. See "Combining Nd isotopes in monazite and Hf isotopes in zircon to understand complex open-system processes in granitic magmas" by Fisher et al., p. 267–270.
